

CLOSET SHELVING · CLEAT DETAIL

Cleat on an End Bulkhead

At an open end the side-cleat is cut back so the end bulkhead wraps and covers the shelf end.

plan view · not to scale

Plan view - looking down on the shelf cleat at an open end bulkhead.

Cut & fasten

Side cleat	1x4, cut to 13³/₄" (14" nominal - ³ / ₄ " bulkhead)
End bulkhead	80³/₄" tall - covers the end of the shelf
Front corner	dogear the exposed corner
1x2 cleats	10³/₈" / 14³/₈" — one standard, whichever yard it came from
Fastening	hit a stud at every cleat wherever possible

END BULKHEAD

Three different depths, and they are not interchangeable: shelf **12"**, side cleat **14"**, bulkhead **16"**. At an open end the cleat is cut back **³/₄"** so the bulkhead covers the shelf end.
